The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524)

C tecorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391 (AAV5234) are genomic fragments from SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from cisolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the curleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the contain sequences that hybridise to the target sequence and isolating the nucleotic acid molecules from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification contain sequence is homologous to amplification or prime the amplification and isolating the amplified sequences. The computer che amplification and isolating the amplified sequences. The computer cadable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, and pharmaceutical compositions and vaccines for Streptococcus pharmaceutical compositions and vaccines for S. pneumoniae. XX Inducing apoptosis in proliferative mammalian cells with inhibitor of IAP or NAIP polypeptide - also methods for prognosis based on presence of IAP and NAIP, specifically applied to cancers involving PT PT p53 mutations XX PS Claim 13; Fig 1; 147pp; English. This sequence encodes the human XIAP protein, which is a inhibitor of apoptosis protein (IAP), and can be used in the method of the invention. The method is for enhancing apoptosis in cells from a mammal with proliferative disease by treatment with a compound that inhibits biological activity of an IAP or NAIP polypeptide. The inhibitory compounds are used to treat proliferative diseases, specially cancers of ovary, breast, pancreas, lymph nodes, skin, blood, lung, brain, kidney, liver nasopharnyx, thyroid,central nervous system, prostate, colon, rectum, cervix or endometrium, particularly to increase their sensitivity to chemotherapeutic agents. High levels of the IAP or NAIP proteins are detected in many cancers and are associated with poor prognosis, resistance to chemotherapeutic agents and mutations in p53 (it is suggested that wild-type p53 suppresses transcription of the IAP or NAIP genes). Transgenic animals are used for testing the effects of antisense oligonucleotides and for screening for the inhibitors.          Example 4; Page 207; 500pp; English.
       The Expressed Sequence Tag was isolated from a human brain cDNA library as part of a large set of ESTs which can be used as markers for human genes transcribed in vivo. They can be used to facilitate on chromosomes, for individual or forensic identification, for mapping type, and for prepn. of antisense sequences, probes and constructs. coding-region prediction program CRM. See also AAQ59041-Q61440.

* NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces

* is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

* as soon as it is available and the accession number will
DOE Joint Genome Institute.

```

```
consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Direct Submission

Submitted (66-NOV-2001) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CBIO 15A, UK. E-mail enquiries:

Cambridgeshire, CBIO 15A, UK. E-mail enquiries:

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

on Nov 12, 2001 this sequence version replaced gi:16555537.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality >=

chemistry or covered by high quality data (i.e., phred quality >=

chemistry or covered by high quality data (i.e., phred guality >=

chemistry or covered by high quality data (i.e., phred guality >=

chemistry or covered by high quality data (i.e., phred guality >=

chemistry or covered by high quality data (i.e., phred guality >=

chemistry or covered by high quality data (i.e., phred guality >=

chemistry or covered by high quality data (i.e., phred guality >=

chemistry or confirmed by restriction digest. The following

assembly was confirmed by restriction digest. The following

abbreviations are used to associate primary accession numbers given

in the feature table with their source databases: Em.; EMBL: Sw.;

SWISSPROT: TT: TREMBL: Wp.; WorkMPEP: Information on the WCFMFP

database can be found at

http://www.sanger.ac.uk/MCP/Chr!

RPII-63BIS is from the library RPOI-11.1 constructed by the group

of Pieter de Jong. For further details see

vorther in sequence is not the entire insert of clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IMPORTANT: This sequence is not the entire insert of clone RP11-63B15 It may be shorter because we sequence overlapping sections only once, except for a short overlap. The true left end of clone RP11-63B15 is at 1 in this sequence. The true left end of clone RP11-30701 is at 141105 in this sequence. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

NOTICE: This sequence represents the full insert of this cDNA. No attempt has been made to verify whether this corresponds to the full-length of the original mRNA from which it was derived. We have tried to obtain double-stranded, or double chemistry sequence across the entire clone, but potentially, there are areas in the sequence where this level of coverage was not achieved. Nevertheless, we are confident of the accuracy of this sequence as all regions of low quality, as defined by PHRAP (P. Green, in preparation), were visually inspected and edited accordingly. The consensus quality values for this sequence have been submitted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4

It currently consists of 2 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and by the finished sequence as soon it is available and the accession number will be preserved.

corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats: all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em. EMBL: Sx.; SMISSPROT: IT: TREMBL: Wp.; WORMPEP; Information on the WORMPEP database can be found at the primary accession numbers given thtp://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial chome contigs of human chromosome 9, constructed by the Sanger Geutre Chromosome 9 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGPVCht9 RP11-301F14 is from the library RPC1-11.2 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             victors: particles and the entire insert of clone RP11-301F14 The true right end of clone RP11-351M4 is at 35779 in this sequence.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Plasmodiu

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                    .....cgcgcttggcgtaatcatnn 1368
